

CSE-221 Database

University management system

Team members:

Ayten Hossam Ahmed.	21100785
Ahella Mohamed Ali	21100824
Aysha Mohamed Elsayed	21100798

Description:

Our database system stores information on the subsystem of the following subsystems (Class material management, Payment option management, Courses management). Our database system was created to handle all kinds of university management. Our database is required to store in it all student information (Full name, ID, current year, phone numbers) and all staff information, it might be a doctor or TA. The student has the option to enroll in/drop one or more courses and the student can view timetable according to his enrolled courses. Also, the student has the option of paying his invoices for the semester by Mastercard. Students must have an adviser which might be another student. On the other hand, the doctor/TA has access to add attendance for some student in the course he teaches.

Business Rules:

- 1-The user must be an AIU student/staff member
- 2-Every course name should be unique on its own.
- 3-There are no two courses with the same code.
- 4-The student adviser can be one of the staff members or another student.
- 5-Every doctor/TA has a unique StaffID.
- 6-Student only have timetable when enroll to courses.
- 7-The student must pay the semester fees at the beginning of the semester to add courses to the new semester.

8-Only doctors can drop courses for a student or the student himself.

Queries:

1-Display all doctors IDs who teach “database”.

2-Display all phone numbers of a certain student id.

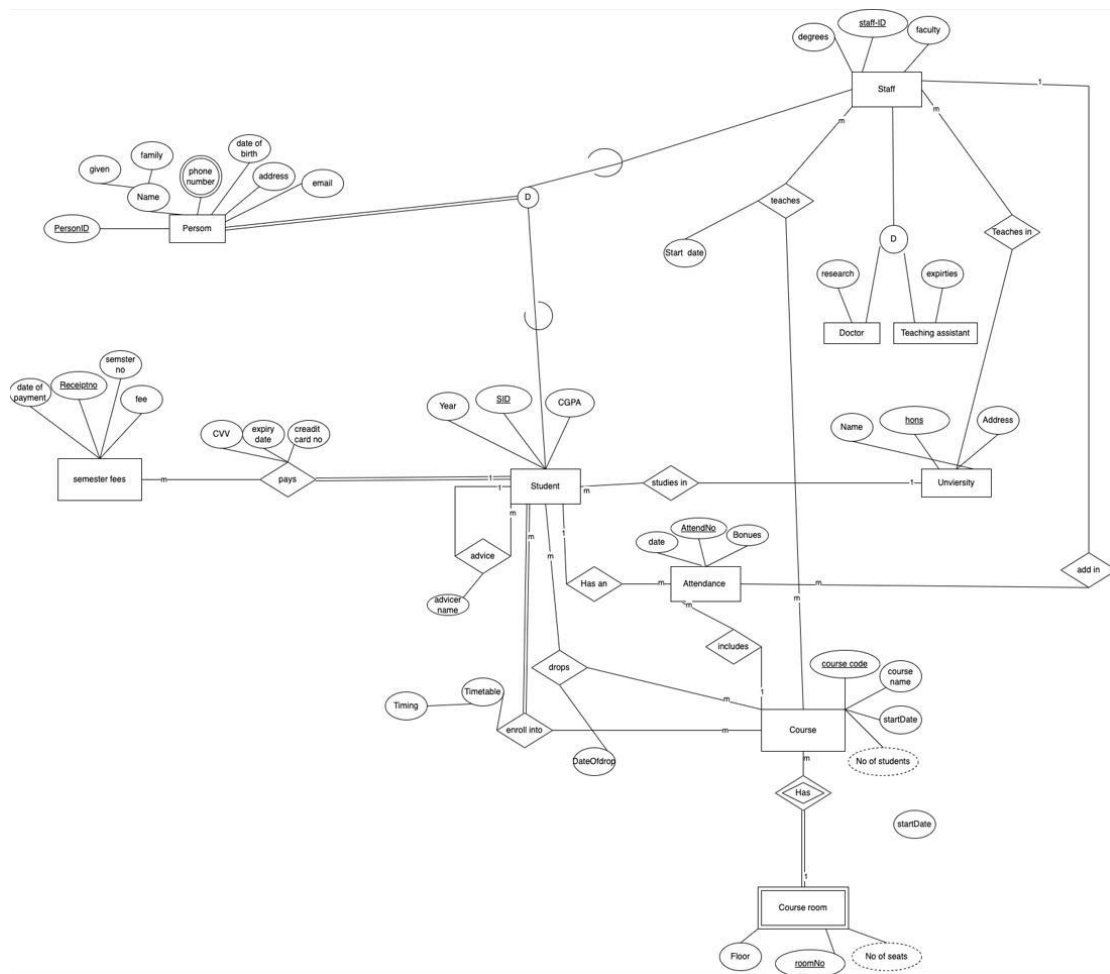

3-Display specific student id semester fee payment information.

4-Display list of students’ ids who pay for the 1st semester fees for a specific semester.

5- Display all students who dropped a certain course with courseID.

6-Display specific doctor ID all courses he/she teaches.

7-Display all students names whose CGPA is more than 3.0.

Relational Schema:

Person (PersonID, givenName,familyName,date of birth, address, email)

Phone (PhoneID,PhoneNumber,PersonID)

Phone(Person ID) is foreign key references from Person(Person ID)

Staff (PersonID,Staff-ID,degrees,faculty,hons)

Staff(Person ID) is foreign key references from Person(Person ID)

Staff(hons) is foreign key references from University(hons)

Doctor (Staff-ID,research)

Doctor(Staff ID) is foreign key references from Staff(Staff ID)

Teaching assistant (Staff-ID,expirties)Teaching assistant(Staff ID) is foreign key references from Staff(Staff ID)

University (hons, Address, Name)

Student(PersonID,SID,CGPA,UniHons)

Advisor(AdvisorID,AID,AdvisorName,AdvisorRoom)

Advisor(AdvisorID) references Student(SID)

Student(UniHons) is foreign key references from University (Hons).

Course(Coursecode,coursename,satetdate,roomno)

Course(Roomno) is foreign key references from Courseroom(Roomno).

Course Room(roomno,floor)

Teaches(Start date,coursecode,staff Id)

**Teaches(courseCode) is foreign key references from
course(coursecode)**

Teaches(StaffID) is foreign key references from Student(StaffID).

Enroll into(Day,timing,SID,course code)

Enroll into(SID) is foreign key references from Student.

Enroll into (Course code) is foreign key references from Course.

Drop(Date of drop, course code , SID)

Drop(SID) is foreign key references from Student.

Drop(Course code) is foreign key Drop references from Course.

**Semester fees (recipt no,fee,date of payment,semesterno,CVV,expiry
date,credit card no , SID)**

SemesterFees(SID) is foreign key references from Student(SID).

Attendance(Attendno,bonues,date,SID,course code ,Staff ID)

Attendance(SID) is foreign key references from Student(SID).

Attendance (Course code) is foreign key references from Course.

Attendance (Staff ID) if foreign key references from Staff.

My SQL:

```

3. Queries:

1-Display all doctors IDs who teach “database”.

```
select Person.GivenName,Person.FamilyName  
from Person,Staff,Doctor,Teaches  
where Person.PersonID=Staff.StaffPersonID  
And Staff.StaffID=Doctor.DoctorID  
And Doctor.DoctorID=Teaches.StaffID  
And Teaches.CourseCode="CSE-221";
```

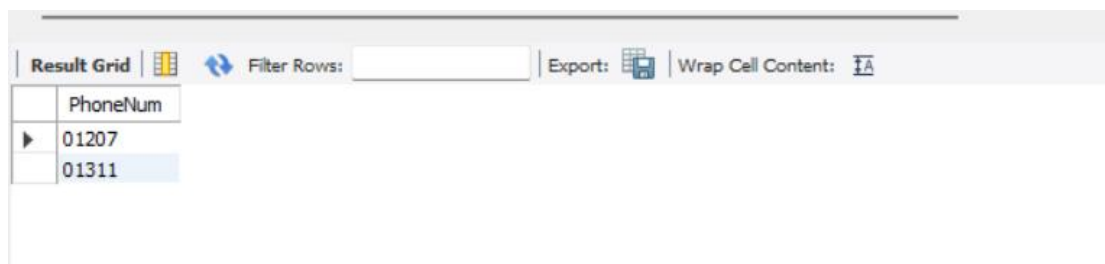

The screenshot shows a database query result grid with the following data:

	GivenName	FamilyName
▶	Islam	Elgedawy
	Islam	Elgabany
	Ashraf	Said

2-Display All Phone Numbers Of a Certain StudentID.

```
select Phone.PhoneNum  
from Student,phone  
where Student.SID="21100784"  
And Student.PersonID=Phone.PhonePersonID;
```

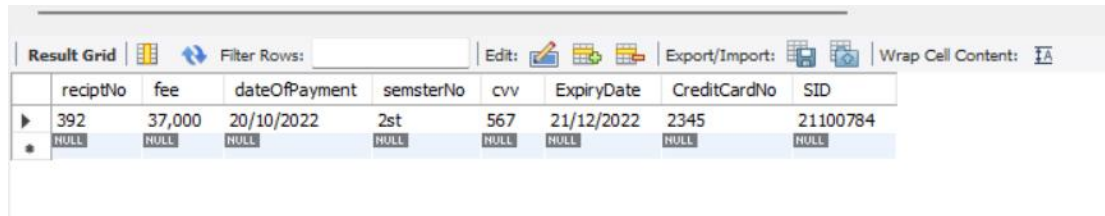

The screenshot shows a database query result grid with the following data:

	PhoneNum
▶	01207

```
select Teaches.CourseCode  
from Doctor,Teaches  
where Doctor.DoctorID=Teaches.StaffID  
And Teaches.StaffID="124";
```

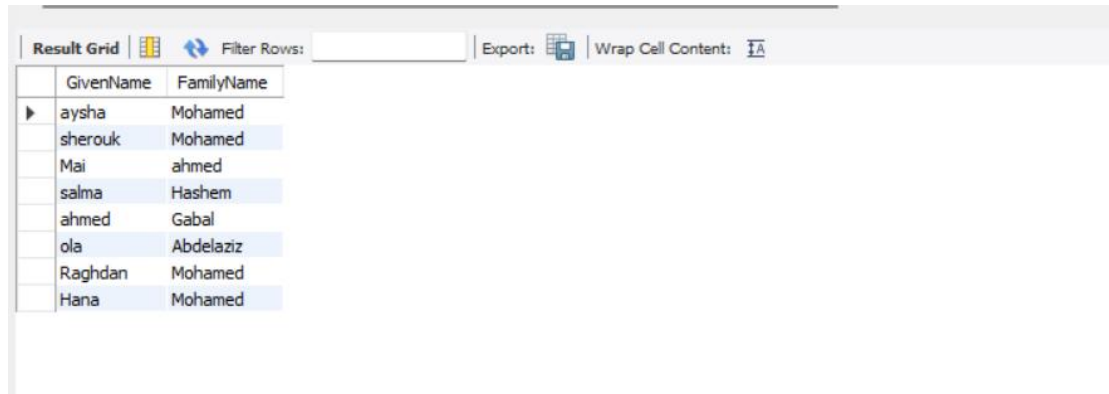

The screenshot shows a database query result grid with the following column: CourseCode. The first row contains the value: CSE-112. The second row contains the value: MAT-312.

	CourseCode
▶	CSE-112
	MAT-312

6-Display All Students Names Whose CGPA is More Than 3.0.

```
select Person.GivenName,Person.FamilyName
from Person,Student
where Person.PersonID=Student.PersonID
And Student.CGPA>"3.0";
```

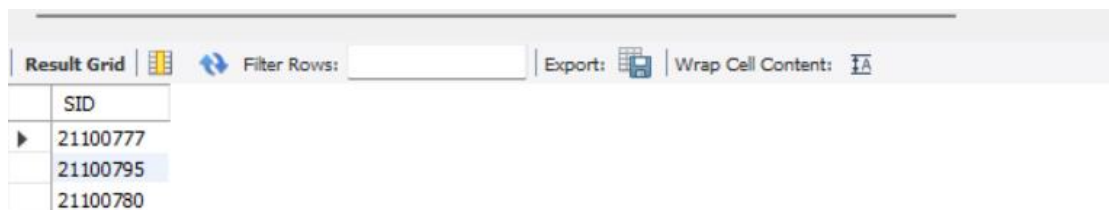

The screenshot shows a database query result grid with the following data:

	GivenName	FamilyName
▶	aysha	Mohamed
	sherouk	Mohamed
	Mai	ahmed
	salma	Hashem
	ahmed	Gabal
	ola	Abdelaziz
	Raghdan	Mohamed
	Hana	Mohamed

7-Display List Of Students'Ids who paied for the First Semester.

```
select SemesterFees.SID
from Student,SemesterFees
where Student.SID=SemesterFees.SID
And SemesterFees.semsterNo="1st";
```

The screenshot shows a database query result grid with the following data:

	SID
▶	21100777
	21100795
	21100780
